

GASPULL TRACTOR

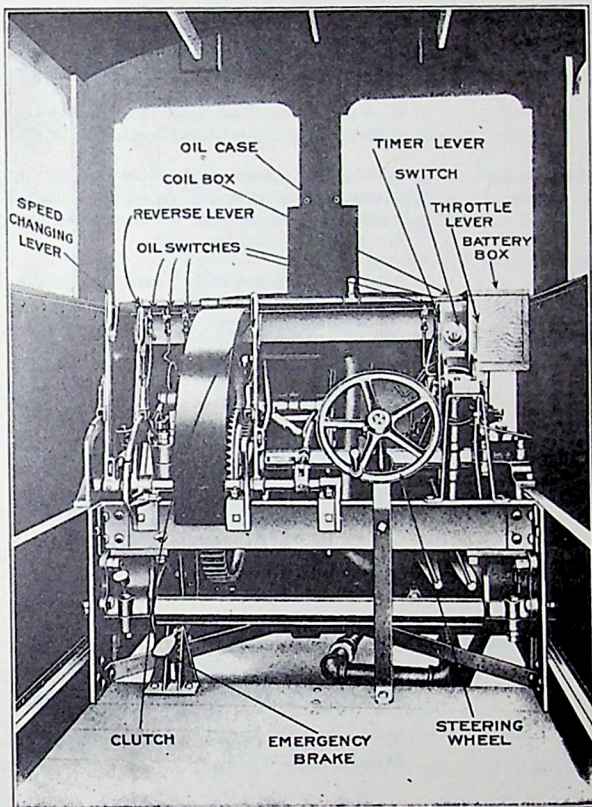

Covering and Cab

The entire machine is provided with a heavy, galvanized iron hinged covering. This keeps dust and grit out of the machinery.

At the same time, the hood can be raised very easily, and any part of the motor or gearing is then within reach for repair or adjustment.

A comfortable, roomy cab is provided for the comfort of the operator. It is but one step from the ground. All levers and other controlling apparatus is right at your hand, as you will see.

Jump into the Cab and see how easy it works
